WIND CERTIFICATION

All our mounting systems have been tested by the independent consultancy firm Peutz BV (equipped with its own wind tunnel) in accordance with all applicable standards. Having wind tunnel tests performed provides us with precise insights to prevent any shifting, lifting, or tilting our mounting systems.

The results of the wind tunnel studies are compiled into an internal calculation tool, enabling us to calculate every project involving mesh tray, tube or M8 applications. This applies equally to projects installed outside the Netherlands.

Quality is and will always be a choice!

Certificates
